AI Automation Implementation Framework

A Practical Worksheet for Evaluating Automation Opportunities

Heuristic Consulting Corporation | AI Systems Architecture & Automation

Automation Readiness Assessment (60 seconds)

Check Yes/No for each question. Score the number of YES answers (0–5).

Question	Yes	No
Is the workflow repeatable (occurs regularly with similar steps)?	☐	☐
Are the inputs structured (forms, documents, emails, or data)?	☐	☐
Is the desired output predictable (draft email, report, content, update)?	☐	☐
Is there a defined owner responsible for outcomes and exceptions?	☐	☐
Would human approval be acceptable before final output when risk exists?	☐	☐

Interpretation

0–2 YES: Not ready yet — clarify the workflow and standardize inputs/outputs.

3–4 YES: Possible candidate — likely needs refinement and governance decisions.

5 YES: Strong candidate for controlled AI automation.

High-impact step: Complete the Workflow Snapshot on Page 3 and send it back with this worksheet. It allows the strategy discussion to start from a concrete architecture proposal instead of discovery.

Workflow Definition

Use short, specific answers. Clarity here determines feasibility and the control model.

1) Workflow objective (what process are you improving?)

_____

_____

_____

_____

2) Input sources (check all that apply)

☐ Forms

☐ Documents (PDF/Word)

☐ Email

☐ Spreadsheets/Databases

☐ APIs / external data

☐ Other

3) Output requirements (check all that apply)

☐ Draft email

☐ Report

☐ Structured document

☐ Content

☐ System update (CRM/Sheets/etc.)

☐ Other

4) Volume / frequency (check one)

☐ Daily

☐ Weekly

☐ Monthly

☐ On demand / ad hoc

5) Current pain (what makes this slow, risky, or expensive?)

_____

_____

_____

_____

Page 3 — Governance, Leverage, and Workflow Snapshot

6) Risk level (what happens if the output is wrong?)

☐ Low — Internal use only

☐ Moderate — External communication / reputation impact

☐ High — Financial / operational impact

7) Human oversight (check one)

☐ Draft-only (human reviews every output before release)

☐ Approval-gated (review exceptions / high-risk only)

☐ No review (not recommended for client-facing workflows)

8) Expected benefits (check all that apply)

☐ Time saved

☐ Faster response time

☐ Increased throughput

☐ Reduced errors

☐ Better consistency

☐ Risk reduction

9) Current effort (estimate)

Hours per week spent on this workflow: _____

Items processed per week (approx.): _____

10) Workflow Snapshot (fill this out — it speeds up the strategy call)

Trigger (what starts the workflow?): _____

Primary input source(s): _____

Desired output: _____

Approval point (if any): _____

Where should results be delivered? (email/CRM/drive/etc.): _____

Next step

If this workflow is repeatable, has structured inputs, and consumes meaningful time, schedule a strategy discussion to confirm feasibility and architecture. Bring this completed worksheet — it becomes the starting blueprint.
